

## Setting up a website – for free

Go to the website: [infinityfree.net](https://www.infinityfree.net)

Click on sign up now and open an account using **your school email address**

A screenshot of the 'Sign up for a free account' form on the InfinityFree website. The form is white and centered on a light blue background. It contains the following fields and elements: the 'InfinityFree' logo at the top; the title 'Sign up for a free account'; an 'Email address' field with the placeholder 'you@example.com'; a 'Password' field with the placeholder 'Your password'; a 'Confirm Password' field with the placeholder 'Confirm your password'; a checkbox for 'I've read and agree to the terms of service.'; a reCAPTCHA widget with the text 'I'm not a robot' and a 'Privacy - Terms' link; a blue 'Create new account' button; and a link at the bottom that says 'Already have account? Sign in'.

On the next window select create an account

A screenshot of the 'Hosting Accounts' page on the InfinityFree website. The page has a light blue header with the title 'Hosting Accounts'. Below the header is a white box containing a table. The table has a header row with 'Your Accounts' on the left and a blue '+ Create Account' button on the right. The first data row shows 'No accounts yet. [Create an account now.](#)'. The second data row shows 'Active Accounts: 0 / 3'.

## Setting up a website – for free

We are not going to pay for a domain name so just pick a subdomain and **enter a sensible name which can be sent to anyone**:

New Hosting Account: Choose a Domain Name

Step 1: Choose a Domain Name

Domain Type

Subdomain

Domain Extension

You can add more domains after your account has been created.

[Back](#) [Check Availability](#)

Make sure you enter an account password – you will not remember the auto-generated password:

Step 2: Enter Additional Information

Account Label

A short description to help you identify the account.

Account Username

Used to login to FTP, MySQL, etc.

Account Password

A unique password, between 8 and 15 characters, letters and numbers only.

☐ I'm not a robot

 reCAPTCHA  
Privacy - Terms

Click finish:

New Hosting Account: Account Created

✔ Your account has been created with username epiz\_32450507!!

Step 3: Account Created

Your account has been created with username epiz\_32450507! Here are some things you need to know:

- It will take a few minutes for your account to be set up, but you can login to the control panel already.
- It can take up to 72 hours for the new domain to be visible everywhere due to DNS caching.
- Please login to the control panel once to enable all features.
- Not sure what to do next? Please see [this guide](#) for some ideas on how to get started.

[Open Control Panel](#)

FTP Username	epiz_32450507
FTP Password	***** Show/Hide
FTP Hostname	ftpupload.net
FTP Port (optional)	21

MySQL Details	
MySQL Username	epiz_32450507
MySQL Password	***** Show/Hide
MySQL Hostname	sql213.epizy.com
MySQL Port (optional)	3306

Domains and Subdomains		
DOMAIN	TYPE	FILE MANAGER
compsci.infinityfreeapp.com	Subdomain	<a href="#">Files</a>
1 total domains		<a href="#">View All Domains</a>

Click on control panel and approve the message:

The screenshot shows an email interface with a browser window open to <https://cpanel.epizy.com/panel/index.php?tid=c14890d1ef6222db6ab4c26bc395a791b0b4cd50>. A large red stamp with the text "IMPORTANT NOTICE" is overlaid on the email content.

Hi epiz\_32450507,

To notify you of changes to service, account status changes, offers, and other important service emails we need permission to send you email.

Please click 'I Approve' below to allow us.

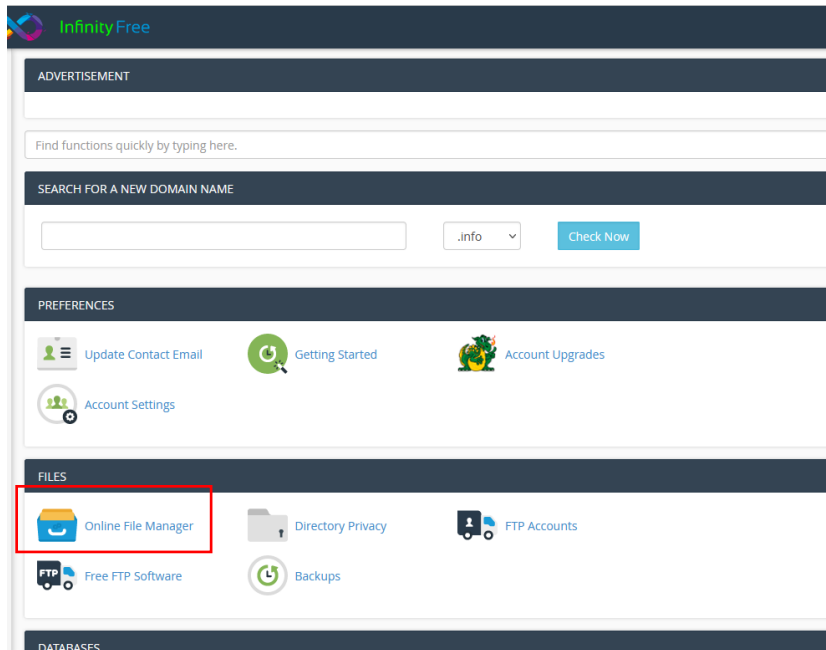

Alternatively to continue with no email alerts, which may cause you to loose your account click "I Disapprove".

## Setting up a website – for free

In the control panel you need to go to the files section and click on Online File Manager

Open the htdocs folder, this is where you upload the files for your website:

The index.html file in this directory, is the home-page for your website.

Write some of your own html code, save it as index.html and overwrite this file.

If you visit your website you should see the code you have written on the homepage.

Now create a second html page with which ever name you like and upload it. If you go to your home page and then append `/<name_of_second_page.html>` you will see the second page you created
